Title : Concerning the Correct Attitude Towards the Question of the Stimulation of Organisms.

Orig Pub: Priroda (Bulg.), 1956, 5, No 4, 3-14

Abstract: A polemical article by the director of the Scientific Institute, "Metodiy Popov", of the Bulgarian Academy of Sciences, who has been working out problems of the stimulation of plants and animals. In an article by Academician Kh. Daskalov (1956), doubt was expressed on the teachings concerning stimulation which had been advanced by Academician Metodiy Popov (1881-

Abstract: 1954) and developed by him over a course of 30 years. The teachings of M. Popov, appearing on the basis of his research on the problems of parthenogenesis, originated from the principles which concern the possibility of increasing the intensity of the metabolism with the aid of stimulators, favorably changing the processes of growth and development. Daskalov incorrectly limits the significance of stimulation to the field of problems of the physiological order. In conformance with the teachings of M. Popov, the general biological question, closely connected with biochemistry, biophysics and which has an important significance in agronomy, animal husbandry and medicine is discussed. It is proved that stimulation is characterized by extended after-effects, and that the biochemical activity of stimulated plants is high not only in seeds, but also later in

Title : Poliploidy in Sesame

Orig Pub : Izv. In-ta biol. B"lg. AN, 1957, 8, 3-26

Abstract : Poliploids were obtained from 13 sorts and populations of subspecies sesamum indicum L subsp. bicarpelatum. The best results (60-70% poliploids) are achieved by processing of the young plants' growing points through 0.25% colchicine solution in thecourse of 48-72 hrs. Plants $C_0$ are ugly and are characterized by the shortened internodes and by shrunken and thickened leaves which are considerably wider than those in diploids. Seeds obtained from them are twice as large. In $C_0$, the fertility is considerably lowered, but in $C_1$ it increases by 50% and more. Poliploids

TITLE: Dynamics of growth and exchange processes in plants after brief treatment

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 7, 1965, 663-665

TOPIC TAGS: plant growth, plant respiration, plant physiology

ABSTRACT: The author investigated the growth rate (accumulation of dry matter or fresh biomass) and rate of exchange processes (intensity of respiration) in vetch seeds treated either for one hour with a 0.15% solution of potassium bromide, or in seeds treated over the same period of time with stronger (0.30, 0.45, and 0.60%) solutions. Results of the two forms of treatment seem to indicate that the stimulation is characterized by a temporary intensification of the rate of exchange processes only. A certain preservation of the stimulation effect may be expected only at a more advanced stage of growth when such an effect is accompanied by considerable morphological changes. This paper was presented by Academician I. Emanuiloff on 1 April 1965. Orig. art. has: 2 figures. [Orig. art. in Eng.] [JPRS]

Title : A Method of Deriving Morphine from Opium.

Orig Pub : Farmatsiya (Bulg.), 1957, 7, No 4, 17

Abstract : A part of opium and 9 parts of water are thoroughly mixed, the mixture is allowed to settle for several hours; then, 0.43 parts of CaO are added, mixed for 1/2 hour, allowed to settle again, filtered thorugh Buchner's funnel, the precipitate is washed until approximately 11 parts of

filtrate are obtained (Ca-morphinate). Five parts of a mixture consisting of 1 part of alcohol (90°) and 5 parts of ether are added to the filtrate, mixed, followed by the addition of 0.4 parts of $NH_4Cl$, vigorous agitation for 20 minutes, settling for 16 hours, and then filtration. The morphine remaining on the filter is water washed, dried at 100° and recrystallized. The yield is approximately 90 percent. Secondary alkoloids may be obtained by employing the above described method. -- A. Vavilova

**Production of essential oil of Salvia sclarea in Bulgaria.** St. Ilievi, El. Dimitrova, and G. Zolotovich (Exptl. Sta., Samokov). *Compt. rend. acad. bulgare sci.* 8, No. 1, 49-52(1955)(in Russian)(English summary.—*S. sclarea* may be successfully grown in Bulgaria. During the 2nd year, the plants yield 4,000-6,000 kg./acre. The yield and quantity of the essential oil compares favorably with the data given in the literature. Only racemes should be used because the mixt. with leaves lowers the quality of the oil. H. G. Zolotovich, St. Ilievo, and El. Dimitrova, *Ibid.* 53-6. The harvested material should not be kept over 2 hrs. before treatment. The residue from the steam distn. contained 0.02% oil with a low percentage of linalyl acetate. The oil obtained in this manner is of poorer quality than by the usual methods. Shirley B. Radding

AUTHOR : Khershkovich, Ye., Iliyeva, S., Dimitrova, Ye.
INST. : Institute of Plant Cultivation, Bulgarian AS
TITLE : On the Problem of the Effect of Climatic Conditions on the Development of Lavender and Mint in the Mountains of Samokov and Kazalyk.
ORIG. PUB. : Iav. In-ta rastenieov"dstvo. B"lg. Ad, 1957, kn. 4, 219-234.
ABSTRACT : The experiment station in Samokov is situated at the altitude of 1030 meters above sea level and the experiment station in Kazanlyk - at the altitude of 380 meters above sea level. It has been determined that both of the regions investigated, are suitable for the cultivation of lavender and mint. However, in Samokov, the growing period is longer than in Kazalyk. No substantial difference was noted in the yield of lavender essential

"Occurrence of Q-Fever in the N Detachment in the City of Stara Zagora"

Sofia, Voenno Meditsinsko Delo, Vol 21, No 5, Oct 66, pp 38-43

Abstract: In March 1965 there were 24 cases of Q-fever among members of the N detachment, which was in field training in the vicinity of Stara Zagora. Eight of the cases were severe and 20 were accompanied by pneumonia. An investigation showed that the focus of infection was a sheep breeding farm at which 64 members of the detachment slept. Twenty of those who slept at the farm caught the disease. A number of sheep at the farm were affected by mastitis, and bortions or were sterile. A serological investigation indicated that 62.5% of these sheep had antibodies against R. burnetti in their blood. Fourteen of the persons infected had a raised temperature for periods un...

Title : A Study of the Effect of Neurolysin on the Mechanism of Immunobiologic Reaction. I. The Influence of Neurolysin on Phagocytosis in vitro.

Orig Pub: Izv. In-ta biol. Bolg. AN, 1957, 8, 281-290.

Abstract: Neurolytic serum (NS) was obtained by means of immunization of rabbits with the tissue of the brain of guinea pig. Undiluted NS (titer 1:512) inhibited in vitro the phagocytic activity of the leucocytes of guinea pig. In dilution of NS to 1:8 and higher, NS started to activate phagocytosis (P); in dilution to 1:32, P increased by 60%. Normal rabbit serum in presence of luminal (2%)
